

talk2amy[®]

for professionals

How does Amy help?

- Save time for important work with clients
- You will appreciate fast basic diagnostics with the possibility of managing results
- By visualizing the results graphically, you can clearly explain specific personality aspects to your clients
- You can use specialized questionnaire sets
- You can use the results in the form of editable reports

Essential diagnostics

You will gain insight into the clients' personalities according to recognized standards*)

Personality interpretation

You can work with detailed description of client's personality in visual and textual form

Specialized questionnaires

You can use extended sets of questionnaires

Analysis groups

It can't be easier to compare clients' personalities in a group

The most important from subscription

*) Not for Healthcare and Clinical Psychology. The results of the Talk2amy platform are based on statistics and prediction and cannot therefore in any way be regarded as an assessment of the health or mental state of the profiled person. If you have any concerns about your health or mental state, it is necessary to contact your doctor. The results of the Questionnaires do not replace the diagnosis or other assessment of an individual's mental or health condition, only a medical doctor is competent to do that.

Client: Complete Questionnaire

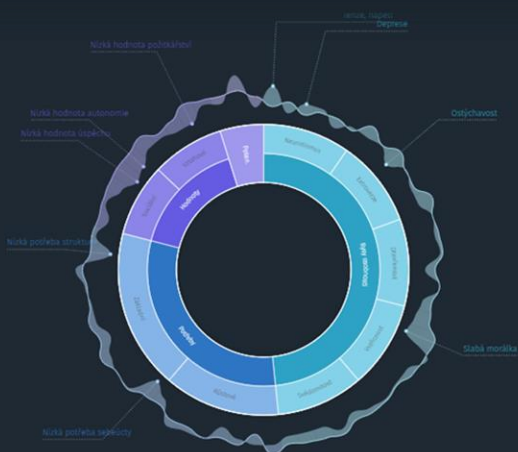

✓ Manage clients

The platform allows you to manage clients easily, with the ability to sort them by groups.

✓ Personality summary

A comprehensive description of the client's personality is displayed in visual form with a summary of the most important characteristics, including a warning about values that could fundamentally affect him/her in life.

What you get?

Detailed visualization

To interpret the results, you can choose the level of detail that suits you. In an interactive chart it is possible to see individual characteristics of personality and their explanations.

Textual interpretation

Amym also describes personality in text based on the level of detail you choose. You will learn not only which characteristics are important, but also what they mean.

Amym osobnost

Osobnost každého člověka můžeme pozorovat v tom, jak jedná, jak prožívá různé situace a také jak přemýšlí. Každá osobnost je originál. Každý z nás je individualita se svou vlastní charakteristikou, způsobem jednání a myšlením. Vlastnosti osobnosti jsou relativně stálé, a proto je možné mnohdy předpovídat, jak se zachováme, nebo jak se budeme v určitých situacích chovat.

Typy osobnosti

Každá osobnost je souhrnem různých vlastností. Vlastnosti a typy se projevují hlavně v tom, jak jednáme. Jsou charakteristické pro naši osobnost a moc se nemění. Nejvíce užívaný model vlastností je postaven na pěti základních rytech a jejich opacích. Člověčenství vůči zkušenosti - zvědavost, vynalézavost a opatrnost, svědomitost - pečlivost a beztarostnost, extravert - iniciativita, sociabilita a ztichlost, samotářství - přívětivost - přátelství, soucitnost a chlad, Neurotizismus - emoční stabilita a neurotizismus.

Neurotizismus

Emoční reakce jsou zpravidla v normě. Stres a negativní pocity ji sice někdy táhnou, ale je schopna se z těchto prožitků opět dostat do normálního stavu prožívání. Působí vyrovnaně, její hlavní charakteristiky jsou "výbušnost", "křehkost". Více se dozvíte v následujících kapitolách.

Co to je Neurotizismus?

Jde o tendenci k častému prožívání negativních emocí. Ta může být podstatně i geneticky nebo výchovně, či ji ovlivňuje prostředí. Sklon k tomuto negativnímu ladění (labilitě či nevyrovnanosti) se projevuje častým prožíváním negativních emocí. Pokud má ně pocity jako je vína, smutek, důvěra nebo strach. Celková osobnost prožívá napětí, které často může vést k psychickým onemocněním, kterým říkáme neuroty. Lidé s vysokou hodnotou budou negativní emoce prožívat velmi intenzivně a dlouho. Lidé s opačným skóre budou přibližně vyrovnaní, spíše klidní a pozitivní.

Výbušnost - charakteristika: Hněv

Rozhodl se velmi snadno. Pokud věci nepůjde, tak jak si je představuje, je pro ně velmi těžké udělat vstřeb a brzy pod kontrolou. Je na ní viditelná duše i ve fyzické rovně - tělesné projevy jsou typické zrudnutí, třesen, svalovou tenzí a hlasovým projevem. Nemá tedy problém s klidem i agresivním chováním. Mnohdy se jí to může i vyplázt - dopomohlo jí to dosáhnout svého cíle. Metody "tady nekřičím, nic se neděje". Má i zkušenost s tím, že jí za to okolí odsuzuje. Pokud se ale rozhodl, je zvyklá vstřeb "pusit ven". V pracovní roli je za to možná odsuzována. Může být i taková jako člověk přímý, který řekne vše hned a jasně.

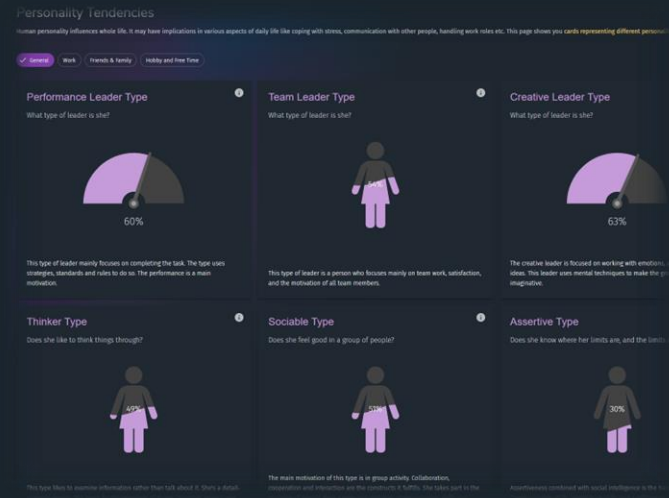

Upozornění: Tato charakteristika dosahuje hodnoty, která by mohla její život závažně ovlivňovat. Bylo by dobré se jí více věnovat.

Co to je charakteristika: Hněv?

Křehkost - charakteristika: Neumíněnost

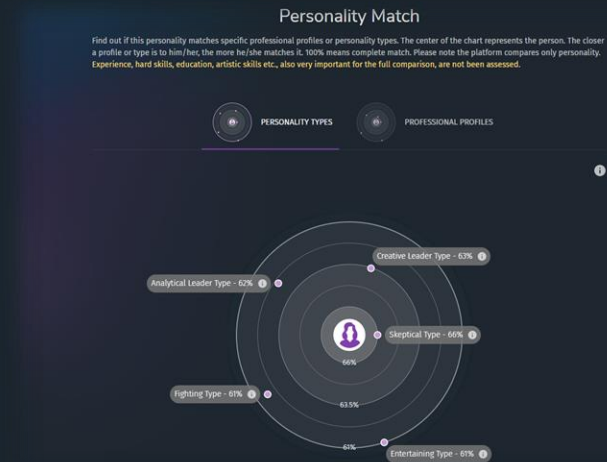

Osobnosti s ní mohou trpět po celou dobu života, což způsobí časté pocity. Mnohdy se jim podaří tyto pocity se svou osobností nebo prostřednictvím terapie. Získávají zkušenosti.

What you get?

Personality tendencies

Each person's personality influences areas such as stress management or communication with other people. Thanks to the cards, you will find out how the personality manifests itself in real life.

Personality match

Amy also shows how the personality matches different personality types and professional profiles.

What you get?

✓ Personality reactions

An experimental function of the platform is to predict the basic emotional response for selected personality in the selected situation.

✓ Personality development

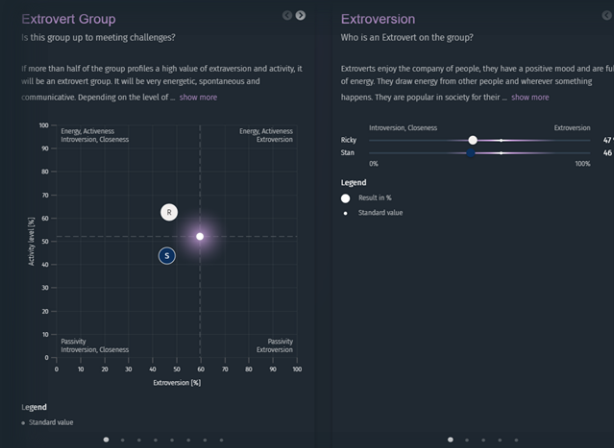

Amy will also recommend areas where you can continue to work and develop based on the profile you're comparing to.

What you get?

Group summary

A comprehensive view of the group in both visual and text forms. It presents the most important characteristics calculated from the average values of all group members.

Group members analysis

Enables detailed analysis of the group through all individual members. Here you can compare group members, find out the match of members with the role, assess team roles, etc.

CALCULATE

Average Profile from a Group of People

For a group of people it is possible to calculate an "average personality" profile. This is an analysis "Intelligent profile from group of people".

Manage Questionnaire Batteries

Every interview with Amy includes one or more questionnaires. For the initial interview a default set of questionnaires, necessary for the interview, is automatically assigned. For further talks you must assign specific questionnaires manually. This can be done on this page through the 'Manage Questionnaire Batteries' section.

Steve Conway (Steven Douglas Conway)		✓	Psychologist	✎

Manage access

The platform allows you to create users, assign roles to them, or invite users to a subscription.

Who did we help?

HOSPITAL HAVLÍČKŮV BROD

“Our hospital in Havlíčkův Brod uses the application for work with personnel, mainly in the field of psychodiagnostics in the office of our psychologist. The application is very user-friendly and complements the personal point of view. We are the first hospital in the Czech Republic to use the application. We believe that it is a useful tool in both the care and recruitment of our employees.”

MGR. PETRA ČERNO

press spokeswoman, Havlíčkův Brod Hospital

Who did we help?

PHDR. THMGR. DANIEL ŠTROBL

”I use the application both for the diagnostics of candidates and for the specific needs of my clients in the office. The expertise and clarity of the entire platform is at a very high and professional level. “

PHDR. THMGR. DANIEL ŠTROBL

Psychologist and psychotherapist focused on classical psychoanalytic psychotherapy. He also works as a psychologist in health care and also provides his services in the field of work psychology, staff selection, soft skills training and managerial coaching
